

LECTURE BY Dr. Abel A. Chávez, MBA
Western State Colorado University

*Integrating Sustainability and Resilience One Community At
A Time: Perspectives, Best Practices, and Tools.*

Thursday Sept. 13th
3:30pm – 4:30 pm
Marquez Hall, Room 222

- Achieving community sustainability and resilience is becoming ever more challenging for communities everywhere.
- Similarly, the potential array of opportunities are becoming far more obvious with an increasing degree of multi-disciplinary and cross-collaborations necessary for achieving meaningful efforts.
- While large urban centers and mega-cities are often the focus of much research, rural & remote communities in the U.S. and small(er) communities in developing economies present fascinating potential for engineers and environmental managers.
- Dr. Abel A. Chávez will share some of the work he and his CS2I Lab team lead in smaller communities using tools often applied in mega-cities.
